## DUAL MIKE

A new way of communicating with your CB.

Midland has created and is proud to introduce to all CB enthusiasts the **first digital preamplified microphone: DUAL MIKE.**

DUAL MIKE is the brand new and revolutionary microphone «**DUAL**»: now the communication is possible in both **analog and digital worlds.** The dual mode allows to **communicate with your CB traditionally or via Bluetooth through APP CBTALK** designed specifically by Midland.

DUAL MIKE is a state-of-the-art microphone completely designed by Midland to revolutionize the CB world and **combine the analogue and digital worlds**.

DUAL MIKE is able to answer the needs of traditional drivers and of those who are more open and receptive to modern technologies.

**Super resistant and robust**, manufactured with top quality materials, it is supplied with a **reinforced cable** to withstand the daily use over the years.

The **light frame** for visual alerts changes color depending on the microphone status (transmission, incoming call, low battery, etc). It is also possible to customize the light ring with your favorite color.

The built-in **3W powerful speaker** guarantees an unprecedented acoustic experience thanks to the special Labyrinth<sup>®</sup>, expressly designed to enhance the bass sounds.

DUAL MIKE is available in 3 different versions depending on the connector type:

- **4 PIN «48» (compatible with the legendary ALAN 48/MIDLAND QUARANTOTTO)**
- **4 PIN (ALAN 100 PLUS B, M10)**
- **6 PIN (M20, ALAN 48 PLUS MULTI B, ALAN 78 PLUS MULTI B).**

**DUAL MIKE includes all this:**

- **A speaker for your smartphone to answer to incoming calls hands-free,**
- **An excellent speaker to listen to music via Bluetooth,**
- **Microphone to use with the analog CB radios or through the CBTALK APP.**

**The APP «CBTALK» joins two worlds: CB and SMARTPHONE.**

**CBTALK allows to communicate with other users without distance limits, to display their info and position on the map.**

The APP operates in two different modes:

1. Reproduces the same interface of your CB on the phone and allows to communicate with users belonging to the same VOIP channel (1-40) within the max range of 30km.
2. Allows to communicate with users who speak your own language wherever they are.

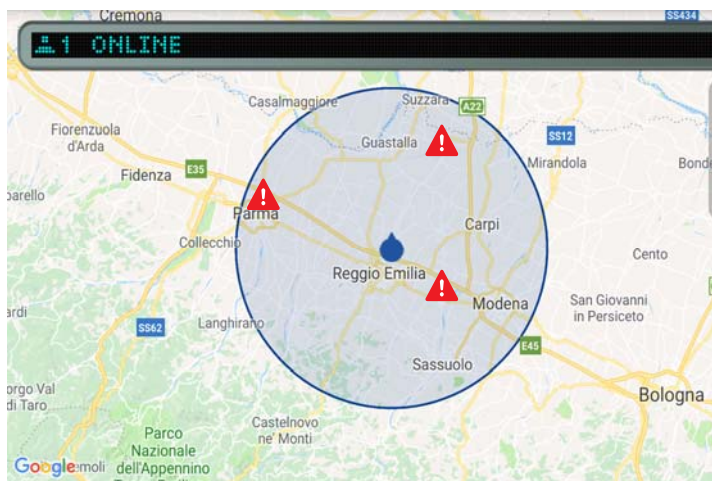

Both modes provide two different views: **map and radar**.  
 The radar view shows all users that are within the range, while the map view is more detailed and provides also the exact position.

CBTALK allows also to release on the map **geo-localised vocal alerts** defined as **«buoys»** - such as accidents, speed cameras, traffic jams – that can be shared and listened to by all users within the range.

Using vocal messages has an immediate usability differently from others APPs available on the market and prevents any distractions while driving.

### Available versions

- DUAL MIKE 4PIN 48                   cod. C1283
- DUAL MIKE 4PIN                    cod. C1283.01
- DUAL MIKE 6PIN                    cod. C1283.02

### The package includes

- DUAL MIKE microphone
- Micro USB cable
- Mike holder with adhesive support

### Technical specifications

- 3W Super Bass speaker
- Bluetooth connection
- Battery life: 8h (continuous), 1 day (standard use)
- Dual PTT: analog + digital
