

Midland G10

Portable PMR446 Transceiver

Cod. C1107

Midland **G10** is the new portable transceiver operating on the PMR446 band.

Essential in its functionalities but with reliable performances, G10 is the ideal solution for those who want a basic device while still keeping the top quality of Midland radios.

Small and with a compact design, this radio is easy to use and provides clear communications with your partners.

Midland G10 is **programmable** through the optional programming software **PRG10**, that allows to set and to easily manage the functions keys and further features.

The peculiarity of this device consists on its versatility and **ease of use**: the knob beside the antenna allows you to easily select the desired channel and the available features can be achieved by the user friendly function keys.

With its 16 channels (8 PMR446+ 8 pre-set), 51 CTCSS tones and 83 DCS codes, G10 is the ideal and effective solution in working and leisure situations that demand reliable communications.
