

G5RV Antenna - 1/2 Size

The half size G5RV is an HF amateur band receive and transmit antenna covering 40 metre to 10 metre bands. It's overall length is 51 feet, and should be fed with good quality 50 ohm coaxial cable (recommended feed length of 45 or 90 feet). The ribbon cable should hang vertically downwards and forms part of the radiating antenna. To achieve optimum results this antenna should be mounted as high as possible either horizontally or in an inverted "V" formation with the centre mounted at least 36 feet from the ground.
